CODECS

COoperative ITS DEployment Coordination Support

C-ITS – a main feature of future mobility.

A wide range of enhanced information and warning services can be offered due to vehicles wirelessly communicating among each other and with road infrastructure.

Traffic and transport on European roads prospectively gets seamless and safer, more efficient and environmental friendly, more reliable and comfortable.

Owing to joint efforts of industrial, scientific and public stakeholders, C-ITS are nowadays mature.

For a concerted roll-out across Europe, implementation approaches, roll-out plans and strategies of all stakeholders involved in intergradient deployment need to be harmonised.

Here, CODECS comes into effect:

The Coordination and Support Action facilitates C-ITS deployment in Europe by
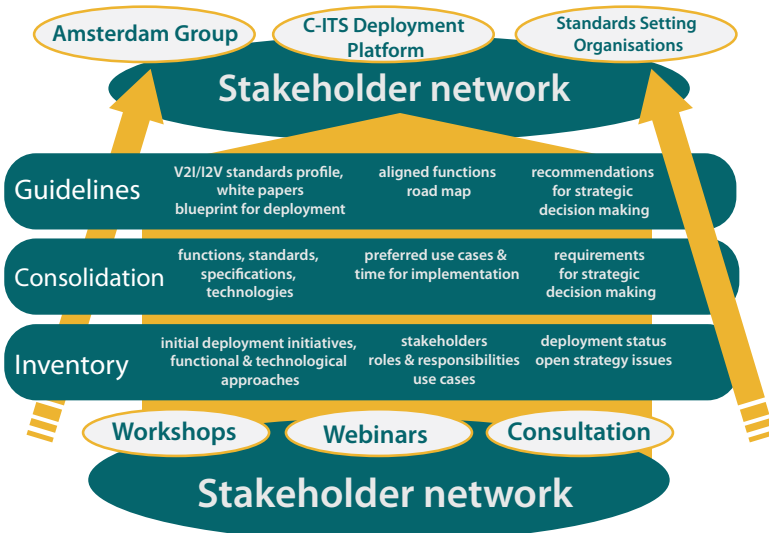

coordinating initial deployment activities

aligning road maps

giving strategy coordination support

raising awareness for the idea of cooperative road traffic

As nodal point consolidating stakeholder interests, CODECS supports the Amsterdam Group, the C-ITS Deployment Platform of the European Commission, Standards Setting Organisations as well as other key deployment players and decision makers to come to a concerted C-ITS deployment approach.

Stakeholder network

Amsterdam Group · C-ITS Deployment Platform · Standards Setting Organisations

Guidelines	V2I/I2V standards profile, white papers blueprint for deployment	aligned functions road map	recommendations for strategic decision making
Consolidation	functions, standards, specifications, technologies	preferred use cases & time for implementation	requirements for strategic decision making
Inventory	initial deployment initiatives, functional & technological approaches	stakeholders roles & responsibilities use cases	deployment status open strategy issues

Workshops · Webinars · Consultation

About CODECS

Coordination & Support Action

1 May 2015 – 30 April 2018

CODECS Partners

The CODECS team comprises 10 partners representing key stakeholder groups in C-ITS deployment. They maintain solid knowledge networks and look at C-ITS deployment from various angles. These characteristics uniquely enable the team to give deployment coordination support need-based for all interest groups along the value chain and innovation phases of C-ITS.
