**THE RACC, OFFICIAL TRAFFIC DATA PROVIDER OF THE CATALAN TRAFFIC SERVICE**

In 2017, the RACC won the first tender made by the Catalan Traffic Service (SCT) for the provision of real time traffic data of the entire Catalan road network, offering information of the congestion levels and travel times on the road network of Catalonia. These data allow identifying the incidences much faster and therefore offering users more reliable and quicker information about the road conditions. They also allow for a faster management of the necessary actions and a more careful long-term planning, based on the provided data.

The RACC offers this service through its alliance with INRIX, worldwide leader in connected car services and transport analysis, with which the club signed a collaboration agreement back in 2009.
